Thank you for purchasing the REX-AD410C.
This manual describes how to use "REX-AD410C". Prior to using the indicator, please carefully read this manual and fully understand the contents.
Keep this manual safely for future reference as required.

- The surface of the display is easy to be injured. So, please be careful not to rub it with a hard material or to hit it.
- The stains on the housing shall be wiped off by the cloth which is dipped into the neutral cleanser diluted by water and wrung tightly, and finish it by a dried cloth.

⚠️ WARNING

- **Wiring precautions**
  If failure or error of this instrument could result in a critical accident of the system, install an external protection circuit to prevent such an accident.
  In order to prevent instrument damage or failure, protect the power line and the input/output lines from high currents by using fuses with appropriate ratings.

- **Power supply**
  In order to prevent instrument damage or failure, power of the specified rating.
  In order to prevent electric shock or instrument failure, do not turn on the power supply until all of the wiring is completed.

- **Never use the instrument near inflammable gases.**
  In order to prevent fire, explosion or instrument damage, never use this instrument at a location where inflammable or explosive gases or vapour exist.

- **Never touch the inside of the instrument.**
  In order to prevent electric shock or burns, never touch the inside of the instrument.
  Only RKC service engineers can touch the inside of the instrument to check the circuit or to replace parts.
  High voltage and high temperature sections inside the instrument are extremely dangerous.

- **Never modify the instrument.**
  In order to prevent accident or instrument failure, never modify the instrument.

- **Maintenance**
  In order to prevent electric shock, burns or instrument failure, only RKC service engineers may replace parts.
  In order to use this instrument continuously and safely, conduct periodic maintenance. Some parts used in this instrument have a limited service life and may deteriorate with time.

 влиЯ METER SAFETY CAUTIONS

- This instrument is designed to be mounted on instrumentation panels. It is therefore manufactured as part of the final product to facilitate wiring. This means that unauthorized personnel can easily access the high-voltage sections in this instrument such as power terminals, etc.
  Therefore, when this instrument is installed on the final product, the user should take the necessary measures for the final product to ensure that unauthorized personnel cannot access the high-voltage sections, etc.

- In order to use this instrument correctly and safely, always observe the cautions described in this manual when performing operations and maintenance.
  RKC assumes no responsibility for any injury or accident resulting from not following these cautions.

- This instrument is intended to be used under the following environmental conditions (IEC1010) [OVERVOLTAGE CATEGORY II, POLLUTION DEGREE 2]
  - To the instrument with power supply of 24V, please be sure to supply the power from SELV circuit.
  - The cleaning shall be done after the confirmation that the power supply to the instrument is off.
  - The stains on the surface of the display shall be wiped off by a soft cloth or tissue paper.

CE CONFORMED INSTRUMENT CAUTIONS

- This instrument is protected from electric shock by reinforced insulation. So please arrange reinforced insulation to the wire for input signal against the wires for instrument power supply, source of power and loads as far as possible.
- EN55022, EN50082-2 and EN61010-1 are applicable to this instrument.

⚠️ WARNING

This is a Class A (EN55022) Instrument. In a domestic environment this product may cause radio interference, in which case the user is required to take adequate measures.
MARKING CAUTIONS

For safe operation of "REX-AD410C", the following "Signal Words and Symbol Marks" are used in this manual.

(Signal Words)

WARNING
Where there are possible dangers such as electric shock, fire (burns), etc. which could cause loss of life or injury, precautions to avoid such dangers are described.

CAUTION
These describe precautions to be taken if unit damage may result if operating procedures are not strictly followed.

NOTE
Extra notes or precautions are added to operating procedures and explanations.

1. PRODUCT CHECK

Check whether the delivered product is as specified by referring to the following model code list.

- Model code
  REX-AD410C - □ * □ - □ - □ - □ / C E
  ① Power Supply
  3: 24 V AC/DC   4: 100 to 240 V AC/DC

② Output
N: No output   4: With output 4-point
1: With output 1-point   5: With output 5-point
2: With output 2-point   6: With output 6-point
3: With output 3-point   ③ Contact Input
N: No contact input   2: With contact input 2-point
*If "With contact input 2-point" is selected, the communication function becomes RS-485.

④ Analog Output
N: No output   5: 0 to 10 V DC
1: 0 to 10 mV DC   6: 1 to 5 V DC
2: 0 to 100 mV DC   7: 0 to 20 mA DC
3: 0 to 1 V DC    8: 4 to 20 mA DC
4: 0 to 5 V DC

⑤ Communication function
N: No function   5: RS-485 (2-wire system)
4: RS-422A (4-wire system)

Confirm that power voltage is also the same as that specified when ordering.

- Accessories
  · Mounting brackets (2 pieces)
  · Instruction manual (IM41AD03-E2) (1 copy)

- Option
  External resistor (One piece)
  Shunt resistor for current input: 250 Ω (± 0.02 %± 10 ppm, 0.25 W or more)
2. MOUNTING

⚠️ WARNING ⚠️

In order to prevent electric shock and instrument failure, do not turn on the power supply until all of the wiring is completed.

■ Cautions for mounting ⚠️

Avoid the following when selecting the mounting location.

- Ambient temperature of less than 0 °C (32 °F) or more than 50 °C (122 °F).
- Ambient humidity of less than 45% or more than 85% RH.
- Rapid changes in ambient temperature which may cause condensation.
- Corrosive or inflammable gases.
- Direct vibration or shock to the mainframe.
- Water, oil, chemicals, vapor or steam splashes.
- Excessive dust, salt or iron particles.
- Excessive induction noise, static electricity, magnetic fields or noise.
- Direct air flow from an air conditioner.
- Should be used indoors where the system is not exposed to direct sunlight.
- Heat to be accumulated radiation heat.

■ Dimensions

![Dimensions Diagram]

- Panel cutout

■ Mounting procedures

1. Make a rectangular cutout corresponding to the number of indicators to be mounted on panel by referring to the panel cutout dimensions.
2. Insert the indicators into the panel from the panel front.
3. Insert an upper mounting bracket along the bracket insertion groove from the back, and then engage a projection at the bracket end with a recess at the groove front and also insert metal fitting legs into slots.
4. Tighten a bracket setscrew from the rear of the bracket with Phillips screwdriver. Do not overtighten the bracket setscrew. Recommended tighten torque: 0.3 N·m or less (3 kgf·cm or less)
5. Set the other mounting bracket in the same way as in 3 and 4.

*This indicator is provided with a waterproof and dustproof rubber packing. For details of replacing the packing due to deterioration, see "9. Replacing the waterproof and dust-proof rubber packing."

![Mounting Diagram]

NOTE

The front of this indicator conforms to IP54 with the indicator mounted on a control panel.
3. WIRING

**WARNING**

- In order to prevent electric shock and instrument failure, do not turn on the power supply until all of the wiring is completed.
- In failure or error of this instrument could result in a critical accident of the system, install an external protection circuit to prevent such an accident.
- In order to prevent instrument damage or failure, protect power line and input/output lines from high currents by using fuses with appropriate ratings.

■ Cautions for wiring

1. For thermocouple input, use the specified compensation wire.
2. For RTD input, use leads with low resistance and having no resistance differences among the 3 leads.
3. Conduct input signal wiring away from instrument power, electric equipment power and load lines to avoid noise induction.
4. Conduct instrument power wiring so as not to be influenced by noise from the electric equipment power.
   - If the instrument may be affected by external noise, a noise filter should be used.
   ① To obtain a satisfactory noise filter effect, select the most suitable type after due consideration of instrument power supply voltage and filter frequency characteristics.
   ② Shorten the distance between twisted power supply wire pitches. The shorter the distance between the pitches, the more effective for noise reduction.
   ③ Install the noise filter on the panel which is always grounded and minimize the wiring distance between the noise filter output side and the instrument power terminals.

![Diagram showing wiring connections]

4. Do not install fuses and/or switches on the filter output signal since this may lessen filter effect.

5. For wiring, use wires conforming to the domestic standard of each country.
6. About 5 to 6 sec. are required as the preparation time of contact output during power-ON. Use a delay relay when the output line, is used for an external interlock circuit.
7. When connecting wires, note that the power, input/MCU and output circuits are isolated independently, while the inside of the input and output circuits are not isolated.
8. This instrument has no power supply switch nor fuses. Therefore, install them separately close to the instrument, if required.
   [Recommended fuse rating: Rated voltage: 250 V  Rated current: 1 A  Type: Time-lag fuse]
9. This instrument is intended to be used under the following environmental conditions. (IEC1010)
   [OVERVOLTAGE CATEGORY II, POLLUTION DEGREE 2]
### Terminal configuration

**Continuous voltage/current output**
- DC 0-10V: L10, L11, L12, L13, L14
- DC 0-100mV: L20, L21, L22, L23, L24
- DC 0-5V: L30, L31, L32, L33, L34
- DC 0-20mA: L40, L41, L42, L43, L44
- DC 4-20mA: L50, L51, L52, L53, L54

**Input/output terminals**
- 1st/2nd outputs: 1, 2, 3, 4, 5
- 5th/6th outputs: 6, 7, 8, 9, 10
- NO: Normally open
- NC: Normally closed
- Voltage input: 10 V DC

#### Power supply:
- **100 to 240 V AC** (50/60 Hz common)
- Power consumption: 9 VA max. (at 240 V AC)
- 7 VA max. (at 100 V AC)

#### Power supply:
- **24 V AC** (50/60 Hz common)
- Power consumption: 7 VA max. (at 24 V AC)

#### Power supply:
- **24 V DC**
- Power consumption: 220 mA max. (at 24 V DC)

### Wiring example

- RS-485 (wire system)
- COM-103B
- Converter
- Host computer
- Control object
- Power (200 V AC)

### 4. NAME OF PARTS

1. Output [OUT] indicator lamp (Red)
2. **MONI/MODE** key
3. **DOWN** key
4. **UP** key
5. **SEL** key
6. Measured value (PV) display unit (Red)

*No EXCD and ALM lamp is used.*
5. OPERATION

5.1 Calling procedure in each mode

Broadly, the following six statuses are available for this instrument.

- PV display mode: Displays measured value (PV)
- SETUP set mode: Mode to select input or output function
- Operator mode: Mode to confirm peak hold value/bottom hold value
- Operator set mode: Mode to reset hold, to release interlock or to change alarm set value
- Engineer mode: Mode to lock setting
- Engineer set mode: Mode to set or confirm various parameters

Press the key for 2 sec.

---

### Key operational cautions

- For this instrument, even if the setting is changed, it is not registered. Pressing the SEL key after the setting is changed registers the setting approx. 2 sec later.
- This instrument returns to the PV display value if key operation is not performed for more than 1 minute.

---

#### Input type display

For this instrument, the input type can be confirmed just after the power is turned on.

<table>
<thead>
<tr>
<th>Display</th>
<th>Voltage input</th>
</tr>
</thead>
<tbody>
<tr>
<td>Input type display (Display for approx. 4 sec)</td>
<td></td>
</tr>
<tr>
<td>Input type</td>
<td>Voltage input</td>
</tr>
<tr>
<td>PV display value</td>
<td></td>
</tr>
</tbody>
</table>
5.2 SETUP set mode

**A:**

Always set the input type.

**1. Always set the input type (InP).**

*B: Decimal point position*

0: No digit below decimal point
1: 1 digit below decimal point
2: 2 digit below decimal point
3: 3 digit below decimal point

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Name</th>
<th>Setting range</th>
<th>Description</th>
<th>Initial value prior to shipment</th>
</tr>
</thead>
<tbody>
<tr>
<td>InP</td>

<td>Device address setting</td>
<td>0 to 99</td>
<td>Sets the communication device address of this instrument. * Displayed when the instrument has the communication function.</td>
<td>0</td>
</tr>
</tbody>
</table>

*A:*

- Group: Input type
  - Voltage (Low type)
    - Voltage mV,V: 0 to 10 mV DC 32
    - Voltage (High type)
      - Voltage V: 0 to 5 V DC 35, 1 to 5 V DC 36, 0 to 10 V DC 37
  - Current input mA
    - 0 to 20 mA DC 37

*1. If the voltage (high) input is used, change the switch in the mainframe.
*2. If a current input of 0 to 20 mA is used, select a voltage (high) input 0 to 5 V, and if a current input of 4 to 20 mA is used, select a voltage (high) input of 1 to 5 V. In either case, connect an external resistor 250 Ω (± 0.02 % ± 10 ppm, 0.25 W or more).

Switch selection

Always turn OFF the power, then pull out the internal chassis. ▲

- For voltage (low) input
- For voltage (high) input

CAUTION

No data is backed up when the power supply is turned off during setting change.
### 5.3 Operator mode

- **Peak hold value (PHLd) display**
  Displays the maximum input value.
  Display range: -1999 to +9999

- **Bottom hold value (bHLd) display**
  Displays the minimum input value.
  Display range: -1999 to +9999

### 5.4 Operator set mode

- **HLďr** (HLďr) Hold reset
- **ILťr** (ILťr) Interlock release
- **SV1** (SV1) First output set value
- **SV2** (SV2) Second output set value
- **SV3** (SV3) Third output set value
- **SV4** (SV4) Fourth output set value
- **SV5** (SV5) Fifth output set value
- **SV6** (SV6) Sixth output set value

- **Symbol** | **Name** | **Setting range** | **Description** | **Initial value prior to shipment**
--- | --- | --- | --- | ---
**HLďr** (HLďr) | Hold reset |  | Simultaneously pressing the UP and DOWN keys while the hold reset characters are displayed executes the hold reset function. |  
**ILťr** (ILťr) | Interlock release | *1 | Simultaneously pressing the UP and DOWN keys while the interlock release characters are displayed releases the output interlock function. |  
**SV1** (SV1) | First output set value | *2 | Sets the output set value of the first output. See "*A". | Scaling high limit  
**SV2** (SV2) | Second output set value | *3 | Sets the output set value of the second output. See "*A". | Scaling low limit  
**SV3** (SV3) | Third output set value | *4 | Sets the output set value of the third output. See "*A". | Scaling high limit  
**SV4** (SV4) | Fourth output set value | *5 | Sets the output set value of the fourth output. See "*A". | Scaling low limit  
**SV5** (SV5) | Fifth output set value | *6 | Sets the output set value of the fifth output. See "*A". | Scaling high limit  
**SV6** (SV6) | Sixth output set value | *7 | Sets the output set value of the sixth output. See "*A". | Scaling low limit

*Disp. when "Interlock function provided" is selected for the first to sixth output.
*Disp. when any item other than "No output provided" is selected for the first output.
*Disp. when any item other than "No output provided" is selected for the third output.
*Disp. when any item other than "No output provided" is selected for the fourth output.
*Disp. when any item other than "No output provided" is selected for the fifth output.
*Disp. when any item other than "No output provided" is selected for the sixth output.

* A Pressing the SEL key after the set value is changed by pressing the UP or DOWN key establishes the set value.
5.5 Engineer mode

Set data unlock (Unck)/lock (LCK) transfer
Select whether the set data lock function is invalid (unlock) or valid.

*Any mode other than PV display, engineer mode is not displayed when the set data is locked. In addition, after locking the set data, only the engineer mode can be changed.

5.6 Engineer set mode

Press the SEL key for 2 sec.

Press the DOWN key.  Press the UP key.

Press the UP or DOWN key.  Press the SEL key.  Press the DOWN key.  Press the UP key.

*6 Not displayed when there is no third output.  *10 Not displayed when there is no analog output.

*7 Not displayed when there is no fourth output.  *11 Not displayed when there is no communication function.

### 6. OPERATING PRECAUTIONS

- Turn on the power after connecting all of the input signal wires, otherwise the instrument judges that an input wire break has occurred.
  - Voltage (low) input Upscale or Downscale (To be specified when ordering)
  - Voltage (high) input Downscale
  - Current input Downscale

- No influence is exerted upon the instrument for power failure of 20 ms or less.
7. DESCRIPTION OF EACH FUNCTIONS

■ Hold function

- Peak hold
  When a PV value larger than the present PV value is input from the time the hold reset function is executed, this function is used to hold the former PV value.

- Bottom hold
  When a PV value smaller than the present PV value is input from the time the hold reset function is executed, this function is used to hold the former PV value.

* Each hold action is activated from the time when the power is turned on.
* The hold reset function can be executed by contact input (terminal Nos. 15 and 16).

■ Output (OUT) function

Each output action is as follows.

- Process output
  \( \Delta \): Output setting

<table>
<thead>
<tr>
<th>High output</th>
<th>( \Delta )</th>
<th>ON</th>
<th>High</th>
</tr>
</thead>
<tbody>
<tr>
<td>Low</td>
<td>( \Delta )</td>
<td>OFF</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Low output</th>
<th>( \Delta )</th>
<th>OFF</th>
<th>High</th>
</tr>
</thead>
<tbody>
<tr>
<td>Low</td>
<td>( \Delta )</td>
<td>ON</td>
<td></td>
</tr>
</tbody>
</table>

■ Output timer function

This function is used to set the time until the output is turned on after the measured value enters the output zone.

■ Output interlock function

This function is used to keep the output state even if the measured value leaves the output zone after entering it.

* The output interlock can be released by contact input (terminal Nos. 15 and 17).

■ Output differential gap

This function can be used to set the output differential gap.

<table>
<thead>
<tr>
<th>Differential gap</th>
<th>Differential gap</th>
</tr>
</thead>
<tbody>
<tr>
<td>ON ( \Delta )</td>
<td>OFF</td>
</tr>
<tr>
<td>Low output set value</td>
<td>High output set value</td>
</tr>
</tbody>
</table>

■ Output hold action

This hold action is used to make output invalid until the input value exits once from the output region by ignoring the output state even if the input value is in the output state when the power is turned on.

■ Set data lock function

This instrument is provided with the set data lock function to prevent the set value from being changed by the front key. Use this function to prevent the operator from mis-operation after completing the settings.

* Keeping the MONI/MODE key pressed for 2sec moves the instrument to engineer mode. In this mode, press the UP or DOWN key to select the lock/unlock state.

■ External contact input

- Hold reset
  The value being held can be reset by turning on the hold reset contact input (terminal Nos. 15 and 16).

- Interlock release
  The output interlock state can be released by turning on the interlock release contact input (terminal Nos. 15 and 17).

8. DISPLAY AT ERROR OCCURRENCE

■ Overscale & Underscale

<table>
<thead>
<tr>
<th>Error code</th>
<th>Details</th>
<th>Measures</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Adjusted data destroyed</td>
<td>Turn OFF the power once.</td>
</tr>
<tr>
<td>2 or 4</td>
<td>RAM error</td>
<td>If error occurs after the power is turned ON again, contact your nearest RKC sale office or agent from which you bought the instrument.</td>
</tr>
<tr>
<td>128</td>
<td>Input error</td>
<td></td>
</tr>
</tbody>
</table>

[Example]
If the adjusted data is destroyed and an input error occurs simultaneously.

Blinking "Err" and "128" display alternately on the PV display unit.
"128": No. obtained by adding No. corresponding to 1 (adjusted data destroyed) to 128 (input error).

■ Self–diagnostic function

If an error is detected during self–diagnosis, "Err" and the details of the error are displayed alternately on the display unit.
9. REPLACING THE WATERPROOF AND DUSTPROOF RUBBER PACKING

⚠️ WARNING ⚠️

- In order to prevent electric shock and instrument failure, always turn off the power supply before replacing the rubber packing.
- In order to prevent electric shock and instrument failure, always turn off the power supply before pulling out the internal chassis.
- In order to prevent injury or instrument failure, do not touch the internal printed circuit board.

If the waterproof and dustproof rubber packing deteriorates, contact your nearest RKC sales office or agent from which you bought the instrument.

<table>
<thead>
<tr>
<th>Type</th>
<th>Parts code</th>
<th>Remarks</th>
</tr>
</thead>
<tbody>
<tr>
<td>REX – A410C</td>
<td>KF400N–32</td>
<td>For the board</td>
</tr>
<tr>
<td>KD400–35</td>
<td></td>
<td>For the case</td>
</tr>
</tbody>
</table>

■ Replacement of dustproof and waterproof rubber packing

⚠️ CAUTION ⚠️

Prior to replacing the rubber packing, first confirm that no water remains, then turn on the power supply. If the water remains, shorting may result.

[ For the board ]

① Pull the internal assembly out of the case, then remove the old rubber packing.

② Replace the old rubber packing with a new one, then put the internal chassis in the case.

*Firmly push the rubber packing in the board until it also contacts the hook.
[For the case]

① Disconnect the wiring from the rear terminal board and also remove the mounting bracket from the instrument case, then remove the instrument from the panel.

② Remove the old packing from this instrument.

③ Firmly push the new rubber packing into the instrument, then re-mount the instrument in the panel.
10. CURRENT INPUT SETTING PROCEDURE (OPTION)

⚠️ WARNING

- In order to prevent electric shock and instrument failure, always turn off the power supply before pulling out the internal chassis.
- In order to prevent injury or instrument failure, do not touch the internal printed circuit board.

10.1 Prior to connecting external resistor (shunt resistor for current input)

If the current input specification is selected, it becomes necessary to change voltage input and also to connect an external resistor (shunt resistor for current input [250 Ω ± 0.02 % ± 10 ppm, 0.25 W or more]). If a current input of 0 to 20 mA is used, select a voltage (high) input of 0 to 5 V, or if a current input of 4 to 20 mA is used, select a voltage (high) input of 1 to 5 V.

In either case, connect an external resistor (shunt resistor for current input [250 Ω ± 0.02 % ± 10 ppm, 0.25 W or more]) between the input terminals at the rear of the case.

The setting procedure for current input is described in the following.

10.2 Setting procedure

[Example] When changing to a current input of 0 to 20 mA

1. In order to prevent electric shock, always turn off the power supply.⚠️

   Next, connect the external resistor between the Nos. 10 and 11 input terminals at the rear of the case.
   (Recommended tighten torque: 0.3 N·m or less [3 kgf·cm or less])

(2) Remove the internal assembly from the case by pressing the latch located at the left of the front panel and pulling it forward.
(3) Change voltage (low) input to voltage (high) input by the internal switch.

Voltage (low) input

Voltage (high) input

(4) Put the internal chassis into the case, then turn ON the power. As a result, the input type and range are displayed. (See "5. OPERATION" on page 6.)

(5) Next, simultaneously press the MONI/MODE and SEL keys to call up SETUP set mode. First, "Input type selection (I \( \rightarrow \) P)" is displayed.

(6) Press the UP or DOWN key to set the instrument to the input type state.

(7) Press the UP key to set a voltage input (high) of 0 to 5 V (input selection : 35). For details on input selection, see page 7. Keeping pressing the UP key to increase the numeric value displayed on the display unit.

(8) After the numeric value is set, this setting becomes valid if SEL key is pressed.
"Input type selection (I \( \rightarrow \) P)" is displayed.

(9) After the setting is finished, press the MONI/MODE key to set the instrument to the PV display state.
