

REX-P24

General Description

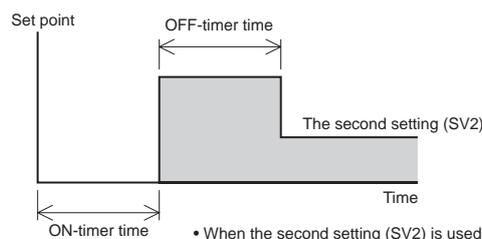

The REX-P24 combines compact 1/16th DIN size for panel space reduction with powerful ramp/soak control features that previously have only been available in much larger instruments. This controller can store up to two program patterns of eight segments per pattern with a 0.3% accuracy. The two patterns can be linked to expand the pattern storage from eight to sixteen segments. These instruments have an easy-to-use front panel, three control modes, multi-level PID, autotuning, and Hold, Step, Run and Reset functions.

Features

- ☆ Three control modes :
Ramp/soak control
Fixed set point control
Timer temperature control
- ☆ Multi-level PID
- ☆ 16-segment program storage
- ☆ NEMA 4X

Timer Temperature Control Mode

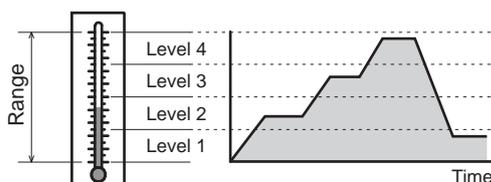

The timer control function is most useful when there are two set points. This allows the operator to set when to start control, when to stop control at SV1 and change SV1 to SV2. The time is set in hours and minutes.

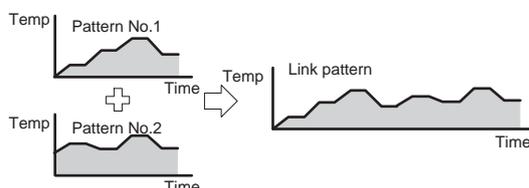

Program Temperature Control Mode

These controllers offer storage of up to four groups of PID variables and the transition from one group to the next is programmable by temperature level. Storage of two program patterns of eight segments per pattern is a standard feature of this instrument. In addition, the two patterns can be easily linked to expand the pattern storage from eight to sixteen segments.

Four sets of PID

Pattern link

Fixed Set Point Control Mode

By setting a soak segment to infinite time, the controller may be used as a fixed set point controller.

Optional Features

- External contact output
Pattern end output
Time signal output
Alarms
- External contact input
Reset, Run, Hold, Step
