Running pattern/ Segment display

Gradient state display

Program pattern/ Output bargraph display

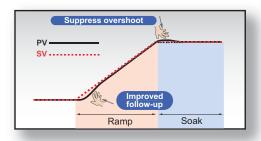

Control

Advanced control

New control algorithm RSS (Ramp Soak Stabilizer)

A newly developed control algorithm designed exclusively for ramp/soak controls improves follow-up performance while simultaneously suppressing overshoot at the transition from ramp to soak.

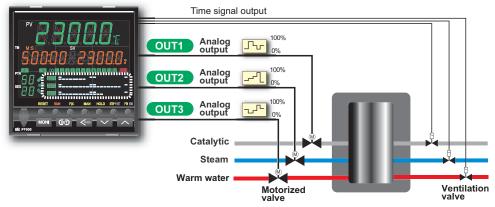

EVOLUTION

Newest technology provides versatile functionality and features to satisfy requirements in a wide range of applications.

Multiple control

Maximum of 3 point program pattern outputs (Output program function)

Up to 3 analog outputs can be used to control three types of devices (such as a motorized valve). Combining time signal outputs allows programming for complex applications.

Fast sampling of 0.05 sec.

Meet different control requirements by switching sampling speeds. Choose 0.05 for "fast" process applications to 0.25 sec. sampling for "stable" for applications which require higher resolutions.

Maximum of 11 digital inputs and 12 digital output

Versatile event handling is achieved with an abundance of digital input/output options including the addition of a wait release and switchover of reverse/direct action.

Customizable keys

Direct access to major functions

Customize the function keys you want to access at a touch by:

· Press once,

· Press twice,

Pressing the key for 2 seconds

Disabled

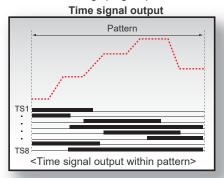

Large memory

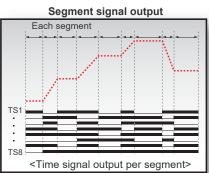

The PF900 can store up to 1024 segments (99 patterns with 10 segments each to 10 patterns with 99 segments each). (32 patterns by 32 segments, yet all patterns are linkable to form a large program)

Enhanced flexibility

Two types of signal modes

You can select a pattern mode that works within the pattern or a segment mode that works within the segment. (Please specify one of the two)

Selectable PID zones

Level-PID or segment PID

Select the best PID option for your application. The set values are stored in 8 stage levels or in 8 memory groups.

Satisfies versatile applications

Flexible pattern end output

Set the end signal to the control mode after the pattern end, valve opening status, event status, or retransmission output signal status.

Flexible WAIT function

The WAIT function can be released by the out-ofwait zone determination (upper/lower sides), digital input or timeout setting.

Segment repeat

Specified segment can be repeated.

Set values management

■ Memory group

Set values of P, I, D, event, segment wait, time signal, program pattern output can be stored in memory groups and can be called up for a segment to be set.

• PID values, Wait and Events: 8 groups

· Time signals: 16 groups

• Program pattern output : Up to 99 points

Communication

Reliable collaborative operation

Collaborative program operation (Inter-controller communication)

Up to 4 slave instruments (FB/RB series and PF900/901) can be connected via exclusive communication port. Digital communication gives isolated communication without setting error, ratio setting of individual slave controller. memory area selection and Run/Stop switchover.

PF900 900.00_{1} (Master) COM2 FB100

- Memory area needs to be selected on FB series.
 If you use FB400, FB900 or PF900 for a slave device, please select Communication Communication protocol among slave devices is Modbus.

· Models available as a master device

PF900/PF901 : Suffix codes for communication : W, X, or Y

PF900/PF901: Suffix codes for communication: W, X, or Y

Models available as a slave device

FB100: Optional codes: E, F, H, or J

FB400/FB900: Suffix codes for communication: 5 or X

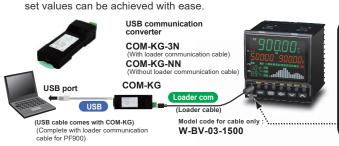

RB100/RB400/RB500/RB700/RB900: Suffix codes for communication: 5, 6, B or C

PF900/901: Suffix codes for communication: 5 or X

Easy data management

Front loader interface + Programming tool

The PF900 comes with a front loader port and programming tool making complicated programming visual and simple to place on a PC. Downloading or Uploading large numbers of set values can be achieved with ease.

Input

Universal input		
a) Temperature, current, voltage (low) input group		
Thermocouple input K, J, E, T, R, S, B, N, PLII, W5Re/W26Re, U, L, PR40-20		
Pt100, JPt100 (3-wire type) DC Voltage input (input impedance: 1MΩ)		
0 to 1V, 0 to 100mV, 0 to 10mV,		
-100 to +100mV, -10 to +10mV, -1 to +1V		
b) Voltage (high) input group		
DC Voltage input (input impedance: $1M\Omega$)		
0 to 5V, 1 to 5V, 0 to 10V, -5 to +5V, -10 to +10V		
c) Current input group		
DC Current input (input impedance: 50Ω)		
4 to 20mA, 0 to 20mA		
(Use dip switch to change input group.)		
0.1 sec (0.05sec/0.25sec is selectable.)		
$0.2\mu V/\Omega$ (Thermocouple input)		
Approx. 0.01% of span (for RTD)		
 Maximum 10Ω per leadwire maxthermocouple 		
Thermocouple input : Up-scale/Down-scale (Selectable) RTD input : Up-scale		
Low voltage input: Up-scale/Down-scale (Selectable)		
Current input: Value around 0mA		
High voltage input: Value around 0V		
0.1 to 100.0 sec. (OFF when 0 is set.)		
- input range span to + input range span		
0.001 to 9.999		
$PV = \sqrt{(Input value)} \times PV ratio + PV bias$		
Low level cut off: 0.00 to 25.00% of span		

Control

Control method	a) Brilliant II PID control	
Autotuning	a) For PID control or position proportioning control b) For Heat/Cool PID control (For extruder, air cooling) c) For Heat/Cool PID control (For extruder, water cooling) d) For Heat/Cool PID control	
Autotuning with auto soak detect:		
Setting range	a) Proportional band: 0 (0.0/0.00) to input span (°C,°F) (for temperature input) 0.0 to 1000.0% of input span (for voltage/current input) (ON/OFF control when P = 0) • Differential gap at ON/OFF control (High/Low individual setting Temperature input: 0 (0.0/0.00) to input span (°C,°F) Voltage/Current input: 0.0 to 100.0% of input span b) Integral time: 0 (0.0) to 3600 (3600.0) sec. (PD control when I = 0) c) Derivative time: 0 (0.0) to 3600 (3600.0) sec. (Pl control when D = 0) d) Cooling proportional band: 1 (0.1/0.01) to input span (°C,°F) (for temperature input) 0.1 to 1000.0% of input span (for voltage/current input) e) Integral time for cooling: 0 (0.0) to 3600 (3600.0) sec. (PD control when I = 0)	

f) Derivative time for cooling : 0 (0.0) to 3600(3600.0) sec. (PI control when D = 0) f) Derivative time for cooling: 0 (0.0) to 3600(3600.0) sec.
g) Overlap/deadband:
-span to +span (°C,°F) (for temperature input)
-100.0 to +100.0% of span (for DC voltage/current input)
h) Control response parameter: slow, medium, fast
i) Output limiter: -5.0 to +105.0% (High/Low individual setting)
j) Cool side output limiter: -5.0 to +105.0% (High/Low individual setting)
k) Heat side cycle time: 0.1 to 100.0 sec.
l) Cool side cycle time: 0.1 to 100.0 sec.
l) Cool side cycle time: 0.1 to 100.0 sec.
m) Manual reset: -100.0 to +105.0% (Heat and cool sides are individual setting.)
o) Overlap/deadband reference: 0.0 to 1.0 (heating reference at zero)
p) Undershoot suppression factor (USS) for cooling:
0.000 to 1.000
q) Ramp/soak stabilizer (RSS): 0.0 to 1.0
• Selectable from enabled/disabled.
a) Number of levels: 8 levels (PID groups 1 to 8)
b) Level setting range: Low limit of input range to high limit of input range (level settings 1 to 7)

Valve drive

Level-PID

Control motor time	5 to 1000 seconds		
Integrated output	OFF, 0.1 to 200.0% of control motor time		
limiter			
Neutral zone	0.1 to 20.0%		
Differential gap	50% of neutral zone (Fixed)		
Valve action	a) close: off, open: off		
at RESET state	b) close: on, open: off		
	c) close: off, open: on		
	• a), b), c) selectable		

Performance

Measuring accuracy	a)Thermocouple Type: K, J, T, E, PLII, U, L Less than -100°C (-148°F): ±1.0°C (±1.8°F) -100 to +500°C (-148 to 932°F): ±0.5°C (±0.9°F) More than 500°C (932°F): ±0.1% of reading Type: N, S, R, WSRe/W26Re Less than 0°C (32°F): ±2.0°C (±3.6°F) 0 to 1000°C (32 to 1832°F): ±1.0°C (±1.8°F) More than 1000°C (1832°F): ±0.1% of reading

Measuring	Type B
accuracy	Less than 400°C (752°F) : ±70.0°C (±126°F)
•	400 to 1000°C (752 to 1832°F) : ±1.4°C (±2.6°F)
	More than 1000°C (1832°F): ±0.1% of reading
	Type PR40-20
	Less than 400°C (752°F) : ±20°C (36°F)
	400 to 1000°C (752 to 1832°F) : ±10°C (18°F)
	More than 1000°C (1832°F): ±0.1% of displayed value
	 Cold junction temperature compensation error
	±1.0°C (1.8°F) [Between 5 and 40°C (41 and 104°F)]
	±1.5°C (2.7°F) Between -10 and 5°C (16 and 41°F), and
	` 40 and 55°C (104 and 122°F)]
	b) RTD
	Less than 200°C (392°F): ±0.2°C (±0.4°F)
	Less than 200°C (392°F): ±0.2°C (±0.4°F) More than 200°C (392°F): ±0.1% of reading
	c) DC voltage and DC current
	±0.1% of span

lime accuracy	±0.01% of reading or input sampling time, whichever is larger.
Time accuracy Number of program patterns	Up to 99 patterns
Number of	Up to 1024 segments
program segments	Up to 99 segments per pattern.
	 Supplied with hold, step, fast forward, fast rewind features.
Segment time	0 hr 0 min to 500 hs 00 min or 0 min 0 sec to 500 min 0 sec
Number of	1 to 9999 repeats
segment repeat	Repeat is disabled when set to 1.
Number of pattern repeat	1 to 10,000 repeats Continuous repeat when set to 10,000.
Number of	0 to 99 patterns
linkable patterns	No pattern link when set to zero
Pattern end	0 hr 0 min to 500 hs 00 min or 0 min 0 sec to 500 min 0 sec
output time: Time signal memory	Output remains on when set to zero. O to 16
group number	No assigned groups when set to zero.
Program starting	a) Starts from a desired value (SV after reset)
mode:	b) Starts from a desired measured input (Time fixed)
	c) Starts from a desired measured input (Time shortened)
	d) Intersection of measurement input and pattern is searched
	and starts from there. (HOLD status when started)
	 e) Intersection of measurement input and pattern is searched and starts from there. (RUN status when started)
WAIT status at the	WAIT condition memory number : 0~8
ime of program start:	No WAIT when set to zero.
	 Selectable from release by wait zone, contact input (trigger), and
	timeout.
WAIT function	a) Wait zone (upper)
	1) Temperature input: 0 (0.0/0.00) to 200 (200.0/200.00)(°C,°F) 2) Voltage/current input: 0.0 to 20.0% of input span
	Wait function off when set to zero
	b) Wait zone (lower)
	1) Temperature input: -200(-200.0)~0(0.0)(°C,°F) or
	-199.99~0.00(°C, °F)
	2) Voltage/current input: 20.0~0.0% of input spanWait function off when set to zero
	c) Wait timeout
	(Time counting resumes unconditionally after the set time has elapsed
	0 hr 0 min to 500 hs 00 min or 0 min 0 sec to 500 min 0 sec
Dottom and autout	Function is disabled when set to zero. DO can be assigned (turns on far 0.5 accord for each nettern report).
Pattern end output	 DO can be assigned (turns on for 0.5 second for each pattern repeat). Time signal or segment signal, whichever is specified.
Time signal output:	a) Time signal
	1) Number of outputs: 8 (TS1 to TS8)
	2) Output assignment: Up to 12 (including 4 relays), assignable by DO
	3) Time signal memory group: 16 groups
	4) Number of memory storage: 16 groups X 16 memories 5) Number of storage memory: 1 to segment No. (max = 99)
	6) Starting time: 0 hr 0 min to 500 hs 00 min or
	0 min 0 sec to 500 min 0 sec
	Ending segment: 1 to segment No. (max = 99), however, ending
	segment must be equal to or larger than the starting
	segment. 8) Ending time: 0 hr 0 min to 500 hs 00 min or
	0 min 0 sec to 500 min 0 sec
	b) Segment signal: TS1 to TS8 can be independently turned ON and
	OFF at each segment.
Programmed	Fixed value is produced at each segment.
preset manual	The function is activated by assigning outputs 1 to 3 to the
output: (Output program	program output. a) Number of output program patterns:
function)	1 to (128/max. segments number)
•	For example, in case of 99 segments, it is "1".
	 Max. segment No.: Number of segments by number of
	patterns multiplied by number of segments.
	b) Setting items: Output program 1 to 3 : -5.0 to +105.0%
Other features:	(Independently adjustable).
Onler realures:	Pattern/segment copy function, tag name edit function (for each pattern), data clear (to initial state), remaining time display of
	pattern, data clear (to initial state), remaining time display of

Memory group

momory	group
PID memory	a) Memory group No: 0 to 8 (Level-PID is activated when set to zero.) b) Setting items: Proportional band, Integral time, Derivative time, Control response parameter, Cool side proportional band, Cool side integral time, Cool side derivative time, Deadband/overlap, Neutral zone, Manual reset, Output limiter (high/low), Cool side output limiter (high/low), Cool side output limiter (high/low), ON/OFF
	differential gap (high/low), LBA time, LBA headband.
Event memory	a) Memory group No.: 0 to 8 (event off when set to zero) b) Setting items: Event 1 to 4
Segment wait memory	a) Memory group No.: 0 to 8 (wait off when set to zero) b) Setting items: wait zone, wait release trigger, timeout for wait
Time signal memory	 a) Memory group No.: 0 to 16 (time signal off when set to zero) b) Memory No.: 1~16 (16 set points per group) c) Setting items: Time signal output destination, starting segment, time signal starting time, end segment, time signal end time.
Program pattern output	a) Pattern Nos.: 1 to (128/max.segment) • Up to 99 segments b) Segment No.: 1 to max segment value. c) Setting items : Output program 1 to 3

Mode selection

Reset (RESET), program (RUN), fixed setpoint control (FIX), and manual control (MAN)
Action when operation mode is selected. Operation mode

7.00.01. 111011 0 0 0 1 0 0 0 1 0 0 0 1 0 0 0 1 0 0 0 1 0 0 0 1 0 0 0 1 0 0 0 1 0 0 0 1 0 0 0 1 0					
Mode transfer Reset mode		After transfer			
		Reset mode	Program control	Fixed setpoint	Manual control
	Reset mode		Control continues with the calculated value of the control.		Control starts with the control output at reset as the manual setpoint.
re transfer	Program control mode	Provide control		Control continues with the SV for a fixed setpoint control.	Output continues after adjusting the final output level of the program control to the output level of manual.
Before	Fixed setpoint control	output at the time of reset	*1 Control continues with the SV for a program control.		Output continues after adjusting the final output level of the fixed setpoint control to the output level of manual.
	Manual control		Control continues after bumpless transfer to manual output		

*1 Program status is retained unless the instrument is reset. If program control is selected, control starts from the retained status.

Output may result in a bump in spite of a bumpless transfer action if the selected control mode is P action, PD action, or ON/OFF action.

Output (OUT)

Number of output	: Up to 3 points(OUT1 to OUT3)
Output function	Control output (MV), Output program, Retransmission output.
	OUT2 and OUT3 can be used as event outputs.
	See output assignment table for details.
Output types:	a) Relay contact output : Form 1a contact,
	Rating: 250V AC 3A (Resistive load)
	Flactuies 1 life 200 000 avales as massins

b) Voltage pulse output: 0/12V DC, Load resistance: 0.0000 cycles or more b) Voltage pulse output: 0/12V DC, Load resistance: 0.0000 or more 0.0000 or more 0.0000 or more 0.0000 or more 0.0000 or less) if OUT2 is not used. c) Current output: 0.0000 or more 0.0000 or less 0.00000 or less 0.0000 or less

Open collector output (sink method): Load voltage 30V DC or lower Allowable load current: 100mA.
 ON voltage: 2V or less (For maximum load current)

Digital output (DO)

DO1 to DO4: Standard

<u> </u>	DOS to DO 12: Optional		
umber of	Up to 12 points (DO1up to 12 (DO1 to 12)		
ıtput	DO1 to 4: Relay contact output (Standards)		
•	DO5 to 12 : Open collector output (Optional)		
utput function	Time signal, event, Heater break alarm, Loop break alarm, Input abnormality, RUN state, FIX mode state, MAN mode status, Ramp		
	status, Soak status, HOLD status, WAIT status, Pattern end status, AT		
	status, FAIL, Communication failure, FBR input abnormality		
utput types	a) Relay contact output, Form 1a contact, 250VAC 1A (Resistive load)		
b) Open collector output (sink type), Load voltage: 30V DC or			
	Allowable load current : 100mA		
	ON voltage : 2V or less (For maximum load current)		
	umber of utput utput function utput types		

Retransmission output (AO)

	(Optional)		
Number of output	Up to 2 points (3 for program outputs) • Depends on output assignment.		
Output function	PV, SV, Control output, Output program value, Deviation,		
	% of segment time (Selectable)		
Output types	a) Current output: 4 to 20mA, 0 to 20mA DC		
	Load resistance : 600Ω or less		
	b) Voltage output: 0 to 1V, 0 to 5V, 1 to 5V, 0 to 10V DC		
	Load resistance : 1KΩ or more		
Scaling range	a) PV, SV : Same as input range		
	b) Control output, Output program output: 0 to 100%		
	c) Deviation: ±input span		
	Output program and segment time percentage are fixed.		
Additional function	Stop/continue selectable during RESET status		

Event (alarm) function

(Optional)

LVGIIL	(alailii) luliction	(Optional)	
Number of ever	nt Up to 4 points (event 1 to 4)		
Event types	Process, Deviation, Band, SV, MV		
Event setting range			
Event output	Freely assignable to digital outputs (D	O1 to 12, OUT2, OUT3).	
type	See Output allocation table for details		
Additional features for event output:	a) Hold function (Valid when power is b) Event action selection at the time o c) Action selection at the time of RESi d) Delay timer: 0.0 to 600.0 sec. e) Event minimum ON and OFF time: 0.0 f) Interlock: Without/With/Swit	of abnormal input. ET the thick is the control of the manual mode and stops control.	
Heater break alarm (HBA) a) Number of CT input: 2 points (1 for each b) Input function: Current detector (CT) c) Input range: CTL-6-P.N: 0 to 30A CTL-12-S56-10L-N: 0 to d) Heater current display range: 0.0 to 10 e) Heater current display accuracy: ±5% f) Interlock: Without/With/Switches into th g) Output method: Freely assignable to th) Action selection at reset status • Heater break alarm (HBA) is not available f		r) to 100A 100.0A 5% of input value or ±2A the manual mode and stops control. to digital outputs	

Loop break alarm (LBA)

a) LBA time: 0 to 7200 sec. (OFF when set to zero)
b) LBD setting: 0 to input span
c) Interlock: Without/With/Switches into the manual mode and stops control.
d) Output method: Freely assignable to digital outputs
See output assignment table.

* Loop break alarm (LBA) is not available for heat/cool PID control type.

Digital input (DI)

Nı In Fı

DI1 to DI6: Optional DI7 to DI11: Standard

umber of input	Up to 11 points (DI1 to 6, DI7 to 11)
put type	Non voltage contact input
unctions	DI1 to DI6: Pattern No. selection + Pattern set, WAIT release
	DI7 to DI11: Pattern No selection + Pattern set, Mode selection (RESET,
	RUN), Direct/Reverse action selection
	Refer to Digital Input table for details

Feedback resistance (FBR) input

(Optional) Not available when CT input is supplied

	CT input is s
Allowable resistance	100 to 10K Ω (135 Ω as standard)
Sampling time	0.1 sec. (For measurement input sampling 0.05 sec.) 0.2 sec. (For measurement input sampling 0.1 sec.) 0.5 sec. (For measurement input sampling 0.25 sec.)

Position proportional control can be used with/without FBR (feedback resistance) input.

Communication (Optional)

[COM1]

	(COMI)
Communication method	(To be specified at the time of ordering)
Protocol:	a) RKC standard (ANSI X3.28 subcategory 2.5 A4) b) Modbus RTU (selectable)
Communication speed	2400, 4800, 9600, 19200, 38400, 57600 bps. (selectable)
Bit structure	a) RKC protocol: Start bit:1, Data bit: 7 or 8, Parity bit: 1 (even or odd) or none Stop bit: 1 or 2 b) Modbus protocol Start bit: 1, Data bit: 8, Parity bit: 1 (even or none), Stop bit: 1 or 2 a) or b) selectable
Maximum connection:	RS-485/RS-422A : 31 units RS-232C : 1 unit

Inter-controller communication (Optional)[COM2]

	(/[ee]
Communication type	Function to send target value to slave controllers.
Communication method	RS-485
Protocol	Modbus RTU
Communication speed	9600, 19200, 38400 bps. (selectable)
Bit structure	Start bit: 1, Data bit: 8, Parity bit: none, Stop bit: 1
Maximum slaves	4 units
Slave controllers	PF900/PF901/FB series (With memory area), RB series (with memory area)

Loader communication

Communication method	RS-485
Protocol	RKC standard (ANSI X3.28 subcategory 2.5 A4)
Communication speed	38400 bps
Bit structure	Start bit:1, data bit: 8. parity bit: none, stop bit: 1
Connection method	Front: Connected to COM-K with an exclusive cable (W-BV-03-1500) • Front loader interface is available only while instrument is powered.

General specifications

Supply voltage	a) 85 to 264V AC (50/60Hz), Rating: 100 to 240V AC b) 20.4 to 26.4V AC (50/60Hz), Rating: 24V AC c) 20.4 to 26.4V DC, Rating: 24V DC
Power	a) 100 to 240V AC: 13.5VA <10.9VA> (at 240V AC),
consumption	9.5VA <7.1VA> (at 100V AC)
	b) 24V AC : 8.5VA <6.2VA>
	c) 24V DC : 230mA <173mA>
	< >: Power saving mode
Rush current	a) 100 to 240V AC : Less than 17.5A (at 240V AC), Less than 7.5A (at 100V AC)
	b) 24V AC : Less than 8.5A
	c) 24V DC : Less than 6.0A
Power failure	A power failure of 20m sec or less will not
	affect the control action. If power failure of more than 20m sec occurs, controller will restart with the state
	of HOT start 1, HOT start 2 or COLD start (selectable)
Memory backup	
wichiory backup	Data retaining period : Approx. 10 years
	Number of writing : Approx. 10,000,000,000 times.
	(Depending on storage and operating conditions.)
Power saving	If any key is not pressed during the user set time period, the backlight
mode	LED is turned off except PV and ALM displays.
	Setting time: 0 to 60 min (0 for no power saving mode)
	 Back to normal display if any key is pressed during the power saving mode.
Insulation	$20M\Omega$ or more (500V DC) between input and ground terminals.
resistance	$20M\Omega$ or more (500V DC) between power and ground terminals.
	20MΩ or more (500V DC) between input and power terminals.
Dielectric	1500V AC for one minute between input and ground terminals.
strength	1500V AC for one minute between power and ground terminals.
A	2300V AC for one minute between input and power terminals.
Ambient temperature	
Ambient humidity	Absolute humidity : MAX.W.C29.3g/m³ dry air at 101.3kPa
Weight	Approx. 470g,
Waterproof/	NEMA type 3 : IP55 (When mounted in a panel, front direction)
Dustproof	
Satety standards	CE marking, UL, cUL, RCM

<Note 1>
If inter-controller communication (master-slave operation) is used, select code: W, X, or Y (that means "with communication 2") for a master device, and 5 or X (communication 1: RS-485) for a slave

- *1 For program or retransmission output, specify voltage or current. For digital output, specify relay or open collector output.
- *2 Heater break alarm (HBA) is not available or current/continuous voltage output.
 Loop break alarm (LBA) is not available for heat/cool PID control type.
- *3 Position proportional control can be used with/without FBR (feedback resistance) input.
- Control output (OUT1, OUT2) assignment by control action

PID control output (OUT), OUT2) assignment by control action

PID control action:
Control output is produced from OUT1. OUT2 can be used as retransmission output or digital output.

Heat/Cool PID control action:
Heating output is produced from OUT1 and cooling output from OUT2.

Position proportioning PID control action:
Opening output is produced from OUT1 and closing output from OUT2.

Output Code Table

Output Type	Code	Output Type	Code
0 to 1V DC *1	3	1 to 5V DC	6
0 to 5V DC	4	0 to 20mA DC	7
0 to 10V DC	5	4 to 20mA DC	8

*1: 0 to 1 V DC output can be specified only for Output 3 (Analog retransmission output).

Quick start code 2

Quick start code 2 tells the factory to ship with each parameter preset to the values detailed as specified by the customer.
 Quick start code is not necessarily specified when ordering, unless the preset is requested.
 These parameters are software selectable items and can be re-programmed in the field via the manual.

- Before operating this product, read the instruction manual carefully to avoid incorrect operation.
- This product is intended for use with industrial machines, test and measuring equipment. It is not designed for use with medical equipment.
- If it is possible that an accident may occur as a result of the failure of the product or some other abnormality, an appropriate independent protection device must be installed.

Caution for the export trade

All transactions must comply with laws, regulations, and treaties

Caution: Avoid imitated products

Imitation of RKC products are appearing in the marketplace. RKC will not warrant such products nor bear the responsibility for any damage and/or accident caused by their use and urge caution when making your purchase
