Digital Controller

FB100

Communication Quick Manual

IMR01W15-E2

This manual describes the connection method with host computer, communication parameters and communication data (except for parameters in Engineering Mode) of the FB100. For detailed host communication such as communication data in the Engineering mode, protocol and Modbus data mapping description, refer to the **FB100/FB400/FB900 Communication Instruction Manual (IMR01W04-E□)**.

📖 The **Communication Instruction Manual** can be downloaded from the official RKC website: http://www.rkcinst.com/english/manual_load.htm.

1. OUTLINE

Digital Controller FB100 (hereafter, called controller) interfaces with the host computer via RKC or Modbus communication protocols. In addition, there is the Modbus data mapping function which enables high-speed communication by collecting only the data to be communicated at all times in the specified address area.

• Communication port
Up to two communication ports can be specified at the time of ordering.
If only one communication port is used, the port can be selected as either a host communication or an intercontroller communication.
If two communication ports are used, Communication 1 is used for a host communication and Communication 2 is used as an intercontroller communication, however, it can be also used as a host communication.

📖 Communication interface for FB100 is limited to RS-485.

☞ When Communication 2 is used for host communication, refer to the **FB100/FB400/FB900 Communication Instruction Manual (IMR01W04-E□)**.

☞ For the intercontroller communication, refer to the **FB100 Instruction Manual (IMR01W16-E□)**.

2. WIRING

⚠ **WARNING**

To prevent electric shock or instrument failure, turn off the power before connecting or disconnecting the instrument and peripheral equipment.

📖 Make sure that lugs or unshielded cables of the communication terminals are not touched to the screw heads, lugs, or unshielded cables of the power supply terminals to prevent electric shock or instrument failure. Use additional care when two lugs are screwed to one communication terminal.

📖 The cable and termination resistor(s) must be provided by the customer.

2.1 Connections for Host Communication

■ **Communication terminal number and signal details**

Terminal No.	Signal name	Symbol
13	Signal ground	SG
14	Send data/Receive data	T/R (A)
15	Send data/Receive data	T/R (B)

■ **Wiring method**

● **When the interface of host computer (Master) is RS-485**

Screw size: M3 × 7 (with 5.8 × 5.8 square washer)
Recommended tightening torque:
0.4 N·m (4 kgf·cm)
Specified solderless terminals:
Manufactured by J.S.T MFG CO., LTD.
Circular terminal with isolation V1.25-MS3
(M3 screw, width 5.5 mm, hole diameter 3.2 mm)
*R: Termination resistors (Example: 120 Ω   1/2 W)
If communication errors occur frequently due to the operation environment or the communication distance, connect termination resistors.
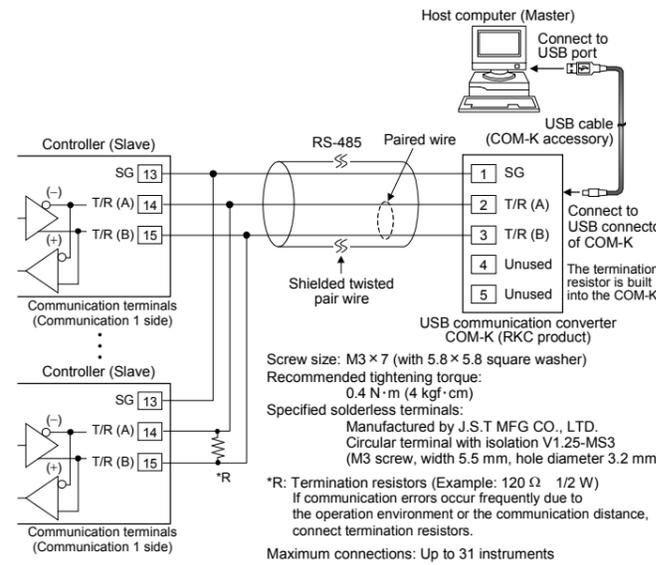

Maximum connections: Up to 31 instruments

● **When the interface of host computer (Master) is RS-232C**
Use a RS-232C/RS-485 converter with an automatic send/receive transfer function.

Screw size: M3 × 7 (with 5.8 × 5.8 square washer)
Recommended tightening torque:
0.4 N·m (4 kgf·cm)
Specified solderless terminals:
Manufactured by J.S.T MFG CO., LTD.
Circular terminal with isolation V1.25-MS3
(M3 screw, width 5.5 mm, hole diameter 3.2 mm)
*R: Termination resistors (Example: 120 Ω   1/2 W)
If communication errors occur frequently due to the operation environment or the communication distance, connect termination resistors.

Maximum connections: Up to 31 instruments

RS-232C/RS-485 converter
Recommended:
CD485, CD485/V manufactured by Data Link, Inc. or equivalent.

● **When the host computer (Master) has a USB connector**
Connect the USB communication converter between the host computer and the controller.

Screw size: M3 × 7 (with 5.8 × 5.8 square washer)
Recommended tightening torque:
0.4 N·m (4 kgf·cm)
Specified solderless terminals:
Manufactured by J.S.T MFG CO., LTD.
Circular terminal with isolation V1.25-MS3
(M3 screw, width 5.5 mm, hole diameter 3.2 mm)
*R: Termination resistors (Example: 120 Ω   1/2 W)
If communication errors occur frequently due to the operation environment or the communication distance, connect termination resistors.

Maximum connections: Up to 31 instruments

USB communication converter COM-K (RKC product)
The termination resistor is built into the COM-K.

☞ For the COM-K, refer to the **COM-K Instruction Manual (IMR01Z01-E□)**.

2.2 Connections for Loader Communication

FB100 is equipped standard with a loader communication connector.
The FB100 loader communication connector, our COM-K USB communication converter (sold separately), and a host computer can be connected with the appropriate cables.

Communication settings on the computer (the following settings are all fixed)
Communication speed: 38400 bps
Address: 0
Start bit: 1
Data bit: 8
Parity bit: Without
Stop bit: 1

The termination resistor is built into the COM-K.
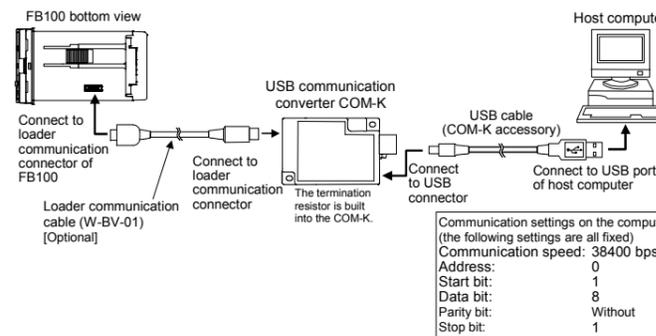

📖 **The Loader port is only for parameter setup.**

📖 Loader communication corresponds to RKC communication (based on ANSI X3.28-1976 subcategories 2.5 and A4).

☞ For the COM-K, refer to the **COM-K Instruction Manual (IMR01Z01-E□)**.

3. SETTING

To establish communication parameters between host computer (master) and controller (slave), it is necessary to set the device address (slave address), communication speed, data bit configuration and interval time on each controller (slave) in the Setup setting mode.

📖 After all communication parameters are set, in order to make these values thus set valid perform any of the following operations.
• The power is turned on again after turning it off once.
• The RUN/STOP mode is changed in RUN from STOP again after changing it in STOP once.

📖 Parameters which are not related to existing functions on the controller are not displayed.

📖 This instrument returns to the PV/SV monitor screen if no key operation is performed for more than one minute.

☞ This section describes the parameters which must be set for host communication. For the screen operation and key operation, refer to the **FB100 Quick Operation Manual (IMR01W13-E□)**.

■ **Description of each parameters**

Symbol	Name	Data Setting	Description	Factory set value
Add1 (Add1)	Device address 1 (Slave address 1)	0 to 99	Do not use the same device address for more than one controller in multi-drop connection. Each controller must have a unique address in multi-drop connection. In Modbus communication, communication is not possible when the address is 0.	0
bPS1 (bPS1)	Communication speed 1	2.4: 2400 bps 4.8: 4800 bps 9.6: 9600 bps 19.2: 19200 bps 38.4: 38400 bps	Set the same communication speed for both the controller (slave) and the host computer (master).	19.2
bIT1 (bIT1)	Data bit configuration 1	Refer to data bit configuration table	Set the same data bit configuration for both the controller (slave) and the host computer (master).	8n1
InT1 (InT1)	Interval time 1 *	0 to 250 ms	The interval time for the controller should be set to provide a time for host computer to finish sending all data including stop bit and to switch the line to receive status for the host.	10

* The interval time for the controller should be set to provide a time for host computer to finish sending all data including stop bit and to switch the line to receive status for the host. If the interval time between the two is too short, the controller may send data before the host computer is ready to receive it. In this case, communication transmission cannot be conducted correctly.

Data bit configuration table

| Set value	Data bit	Parity bit	Stop bit		Set value	Data bit	Parity bit	Stop bit
8n1	8	Without	1		7n1 [a]	7	Without	1
8n2	8	Without	2		7n2 [a]	7	Without	2
8E1	8	Even	1		7E1 [a]	7	Even	1
8E2	8	Even	2		7E2 [a]	7	Even	2
8o1	8	Odd	1		7o1 [a]	7	Odd	1
8o2	8	Odd	2		7o2 [a]	7	Odd	2

[a] When the Modbus communication protocol selected, this setting becomes invalid.

📖 Communication 2 parameters are displayed only when Communication 2 is used for host communication.
For the Communication 2 parameters, refer to the **FB100 Parameter List (IMR01W14-E□)** or **FB100/FB400/FB900 Communication Instruction Manual (IMR01W04-E□)**.

4. COMMUNICATION DATA LIST

📖 • Modbus register address
    HEX: Hexadecimal
    DEC: Decimal
  • Attribute (A method of how communication data items are read or written when viewed from the host computer is described)
    RO: Read only data   (Host computer ← Controller)
    R/W: Read and Write data (Host computer ↔ Controller)
  • Data

RKC communication
ASCII code data of 7 digits

Most significant digit ···· Least significant digit

Modbus
16-bit data

Bit 15 ······ Bit 0
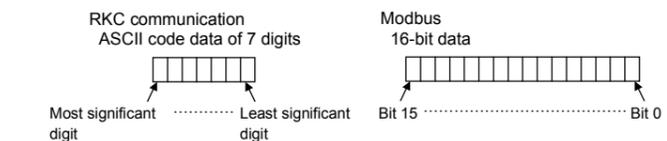

■ **Communication data (RKC communication/Modbus)**

No.	Name	RKC Identifier	Modbus register address HEX	Modbus register address DEC	Attribute	Data range	Factory set value

4	Event 3 set value (EV3) [1]	0503	1283	R/W		50
5	Event 4 set value (EV4) [1]	0504	1284	R/W		50
6	Control loop break alarm (LBA) time [2]	0505	1285	R/W	0 to 7200 seconds (0: Unused)	480
7	LBA deadband [2, 3]	0506	1286	R/W	0 to Input span	0
8	Set value (SV) [3]	0507	1287	R/W	Setting limiter low to Setting limiter high	TC/RTD: 0 V/I: 0.0
9	Proportional band [heat-side]	0508	1288	R/W	TC/RTD inputs: 0 (0.0, 0.00) to Input span [3] (Unit: °C [°F]) Voltage (V)/Current (I) inputs: 0.0 to 1000.0 % of Input span 0 (0.0, 0.00): ON/OFF action	TC/RTD: 30 V/I: 30.0
10	Integral time [heat-side]	0509	1289	R/W	PID control or Heat/Cool PID control: 0 to 3600 seconds or 0.0 to 1999.9 seconds [4] (0, 0.0: PD control [both heat-side and cool-side]) Position proportioning PID control: 1 to 3600 seconds or 0.1 to 1999.9 seconds [4]	240
11	Derivative time [heat-side]	050A	1290	R/W	0 to 3600 seconds or 0.0 to 1999.9 seconds [4] (0, 0.0: PI control)	60
12	Control response parameter	050B	1291	R/W	0: Slow 2: Fast 1: Medium [When the P or PD action is selected, this setting becomes invalid.]	Note 1
13	Proportional band [cool-side] [5]	050C	1292	R/W	TC/RTD inputs: 1 (0.1, 0.01) to Input span [3] (Unit: °C [°F]) Voltage (V)/Current (I) inputs: 0.1 to 1000.0 % of Input span	30
14	Integral time [cool-side] [5]	050D	1293	R/W	0 to 3600 seconds or 0.0 to 1999.9 seconds [4] (0, 0.0: PD control [both heat-side and cool-side])	240
15	Derivative time [cool-side] [5]	050E	1294	R/W	0 to 3600 seconds or 0.0 to 1999.9 seconds [4] (0, 0.0: PI control)	60
16	Overlap/Deadband [5]	050F	1295	R/W	TC/RTD inputs: −Input span to +Input span [3] (Unit:°C [°F]) Voltage (V)/Current (I) inputs: −100.0 to +100.0 % of Input span	0
17	Manual reset [6]	0510	1296	R/W	−100.0 to +100.0 %	0.0
18	Setting change rate limiter (up) [3]	0511	1297	R/W	0 to Input span/unit time * (0: Unused)	0
19	Setting change rate limiter (down) [3]	0512	1298	R/W	* Unit time: 60 seconds (factory set value)	0
20	Area soak time [7]	0513	1299	R/W	0 to 11999 seconds or 0 to 5999 minutes Data range of Area soak time can be selected on the Soak time unit.	0
21	Link area number [7]	0514	1300	R/W	0 to 8 (0: No link)	0
22	Unused	0515	1301	—	—	—

[1] If there is no Event function, set to RO (Only reading data is possible). If Event 4 corresponds to Control loop break alarm (LBA), the Event 4 set value becomes RO.
[2] Data write is enabled only when the Event 4 corresponds to Control loop break alarm (LBA).
[3] Varies with the setting of the Decimal point position selection.
[4] Varies with the setting of the Integral/Derivative time decimal point position selection.
[5] Data write is enabled only when the control action is Heat/Cool PID control.
[6] Data write is enabled only when the Integral time [heat-side] or Integral time [cool-side] is set to 0.
[7] When "Digital input (DI) assignment" (Engineering mode) is somewhere between 5 and 11 (no memory area set input), the Area soak time and Link area number are RO (Only reading data is possible).

For the Modbus data mapping function, refer to the FB100/FB400/FB900 Communication Instruction Manual (IMR01W04-E□).

★: Data related to Multi-memory area function
[1] During operation in manual mode, the manual mode of the operation mode state monitor is set to the "1: ON" state and the remote mode of the same monitor is set to the "0: OFF" state even if the parameter, "Remote/Local transfer" is set to "1: Remote mode."
[2] Data range of Memory area soak time monitor can be selected on the Soak time unit.
RKC communication: 0:00 to 199:59 (min:sec) or 0:00 to 99:59 (hrs:min)
Modbus: 0 to 11999 seconds or 0 to 5999 minutes
[3] Data write is enabled only when the Remote setting (RS) input is provided.
[4] When "Digital input (DI) assignment" (Engineering mode) is somewhere between 5 and 11 (no memory area set input) and when the Control area Local/External transfer is "1, the External mode," the Memory area transfer is RO (Only reading data is possible).
[5] If there is no Event function, set to RO (Only reading data is possible). If Event 4 corresponds to Control loop break alarm (LBA), the Event 4 set value becomes RO.
[6] Data write is enabled only when the Event 4 corresponds to Control loop break alarm (LBA).
[7] Varies with the setting of the Decimal point position selection.

★: Data related to Multi-memory area function
[1] Varies with the setting of the Decimal point position selection.
[2] Varies with the setting of the Integral/Derivative time decimal point position selection.
[3] Data write is enabled only when the control action is Heat/Cool PID control.
[4] Data write is enabled only when the Integral time [heat-side] or Integral time [cool-side] is set to 0 or 0.0.
[5] When "Digital input (DI) assignment" (Engineering mode) is somewhere between 5 and 11 (no memory area set input), the Area soak time and Link area number are RO (Only reading data is possible).
[6] Data range of Area soak time can be selected on the Soak time unit.
RKC communication: 0:00 to 199:59 (min:sec) or 0:00 to 99:59 (hrs:min)
Modbus: 0 to 11999 seconds or 0 to 5999 minutes
[a] Data write is enabled only when the CT1 is provided.
[b] If CT1 assignment corresponds to "0: None," set to RO (Only reading data is possible).
[c] Data write is enabled only when the HBA1 type is type B.
[d] Data write is enabled only when the CT2 is provided.
[e] If CT2 assignment corresponds to "0: None," set to RO (Only reading data is possible).
[f] Data write is enabled only when the HBA2 type is type B.
Note 1: PID control, Position proportioning PID control: 0 Heat/Cool PID control: 2
